Why earth resistance can be found by only clamping it?

Of these earth resistances, R_1 , R_2 , \cdots R_n can be considered that they are connected in parallel.

And can be regarded as a combined resistance Rs. The Rs can be regarded small enough against $\mathbf{R}_{\mathbf{x}}$ since a combined resistance consists of several resistances. Following is an equiva-

 $\frac{\sum_{i=1}^{n} 1}{R_i}$

lent circuit diagram of Rs= this circuit.

Voltage \mathbf{V} is applied to the object (Resistance $\mathbf{R}_{\mathbf{x}}$) measured from the voltage injection transformer CT1, and the current I corresponding to the earth resistance is flowed.

The current I is detected with detection transformer CT2, and object (Resistance R_x) measured can be put out by the calculation. (refer to the right chart)

Please read the "Safety Warnings" in the instruction manual supplied with the instrument thoroughly and Safety Warnings : completely for correct use. Failure to follow the safety rules can cause fire, trouble, electrical shock, etc. Therefore, make sure to operate the instrument on a correct power supply and voltage rating marked on each instrument.
